

Electricity

Electricity is a **form of energy**. We can control it and use it

Electrical current

The **flow of electricity**

Electric shock

When **electricity flows through the human body casuing a shock**. Exposure to electrical energy can be dangerous, resulting in damage or death

Circuit

A **path** which electricity flows around

Battery

A **store of energy**, also known as a cell

Light bulb

A component that **converts electrical energy to light energy**

Switch

A component that **can make or break an electrical circuit**

Wire

A **thin piece of metal covered in plastic** that conducts electricity.

Conductor

Materials that **allow electricity to pass through** them are called conductors

Insulator

Materials that **do not allow electricity to pass through** are called insulators

SERIES CIRCUIT

A series circuit has one path for electricity to flow.

AA Battery

1.5 V (Volts)

Car Battery

12 V (Volts)

Granville T Woods (1856-1910)

was an inventor and electrical engineer. He worked on many inventions that made electrical railways safer and more efficient.
