purpose

Materials and Magnets

the word scientists use to describe what things are made from, e.g., glass, paper,

the way a material looks, how it feels, or what it can do -- we can see, feel, or measure properties of materials

a material that allows light to pass through, so we can see through it

a material that does not allow light to pass through, so we cannot see through it

a magnet attracts some metals using a force called magnetism

to pull towards

wood

to push back

the reason that something has been chosen or made
